## Why ERP is important for your business?

The following are five reasons to start with Schinkels:

- You save money
- It is open-source
- You have control over your data
- Proven deployment for ease of use
- Excellent support by Schinkels

To stay competitive in business, it's important to keep up with technology.

Using outdated methods can hold your business back, while automation can simplify operations, boost efficiency, cut costs, and optimize productivity for businesses of any size.

If you are not sure what features you need in an ERP system, Schinkels Technik can consult you to find out what method is available.

“

The advance of technology is based on making it fit in so that you don't really even notice it, so it's part of everyday life.

Bill Gates

## Enterprise Resource Planning ERP

### What is ERP software?

In short, ERP (Enterprise Resource Planning) is a set of software that functions to manage and integrate various operational activities in a business.

Doing manual daily business activities may be challenging and monotonous.

Reach out to us for demo on ERP systems by Schinkels Technik. We will explain what they are, where they come from, different kinds of ERP systems, and how your business can use them.

# So, what is Schinkel's ERP?

Schinkel's ERP is an open-source technology.

This means that we provide the code to the people who implement the software, essentially, you can do everything you want with the software.

Open-source, allows organizations to change and modify technology according to their requirements.

Schinkels ERP sets up and markets its product as an open-source alternative to SAP, Oracle, and other large-scale products.

## Who can benefit from Schinkel's ERP?

Every organization that:

- Manage employees
- Buys product or services
- Sell or distributes something
- Accounts for finance

Schinkel's business software can do many things. It can help you understand your business better with tools that show you important information.

It can also tell you when something important happens, give different people different levels of access, and be used on mobile devices.

These tools help companies use data to make choices, find and solve problems fast, and get important info anytime, anywhere.

## Schinkel's ERP System Modules

|   |                    |
|---|--------------------|
| CRM<br>(Customer Relationship Management) | Warehouse          |
| PoS<br>(Point of Sales)                   | Services           |
| Sales                                     | Accounting         |
| Websites                                  | Inventory          |
| e-Commerce                                | Project Management |
| Purchasing                                | Manufacturing      |

## What is open-source ERP system?

If the software doesn't let you do what you want with it, it's not free and belongs to someone else.

### So, here is the freedom you should know:

- The freedom to run the program for any purpose.
- The freedom to study and modify the program to fit your IT needs with access to the source code.
- Freedom to redistribute and distribute edited versions.

You will have control on and where your system should be.

# Schinkel's ERP Services

Our plan to put something into action has these steps:

**Requirements gathering:** We'll collaborate with your team to understand your business, procedures, and information organization. We'll analyze your current situation, document your processes, and make necessary adjustments for seamless integration.

**System setup:** We will change Schinkels ERP so it fits your needs perfectly. This means you can easily keep track of your money, things you have in stock, and what you sell. We might need to make adjustments so that everything fits perfectly.

**Data migration:** We will transfer your old information to a new computer system. We will help you to make sure your information is going where it is supposed to go without any mistakes or unsafe situations.

**Application integration:** We'll connect info with other programs through APIs & teach employees how to use ERP software efficiently & produce good reports.

**Go-live and support:** When the system is ready, we will start using it in stages so that your business can keep running smoothly. We will also be available to help you if you have any problems. We'll keep helping you to keep the system working well and adapting to your business as it changes.
